ABOUT ME

Web Developer with 6+ years of experience in building scalable and responsive web applications using React.js, Angular (6+), and Vue.js. Experienced in delivering client projects across multiple domains with working knowledge of Node.js, MongoDB, and RESTful API integration. Strong in UI development, performance optimization, and agile methodologies.

EDUCATION

2015 - 2018
Master of Computer Application (MCA)
College of Engineering, Guindy (CEG), Chennai
CGPA: 6.05

2012 - 2015
Bachelor of Information Technology (Bsc - IT)
GTN Arts and Science College, Dindigul
CGPA: 7.07

2011 - 2012
Higher Secondary Certificate (HSC)
C.S.M.A Higher Secondary School, Dindigul
61.83%

2009 - 2010
Secondary School Leaving Certificate (SSLC)
C.S.M.A Higher Secondary School, Dindigul
67.80%

PROFESSIONAL EXPERIENCE

Organization: Sumanas Technology - Madurai
Designation: WebDeveloper (React Js, Angular, Vue Js, React Native)
Duration: Oct 2020 – Aug 2025 (**4 Year 10 Months**)

Career Break: Mar 2024 – Dec 2024 (**10 Months**)
Career break for personal health reasons

Organization: Wondersoft Pvt Ltd - (Client Company)
Designation: Angular Developer
Duration: May 2019 – Sep 2020 (**1 Year 4 Months**)

Organization: ValueMatters Org Consulting Pvt Ltd
Designation: Full Stack Developer
Duration: May 2018 – May 2019 (**1 Year**)

SKILLS

- React JS
- Node JS, Express JS
- Testing & Debugging
- Vue JS
- Git Version Control
- Angular 6+
- UI/UX Design
- React Native
- SQL, MongoDB

PROJECT EXPERIENCE

Project 1: Hospital & Patient Management System (Multi-Tenant)
Sumanas Technology

Role: Frontend Developer (Angular)
Technologies Used: Angular 7, TypeScript, HTML5, SCSS, RxJS, REST APIs, Git

Project Description:
Worked on a robust, multi-tenant hospital management system designed to support diverse healthcare workflows including Inpatient (IP), Outpatient (OP), Pharmacy, Laboratory, Pathology, and Radiology modules. The application was built with role-based access control to ensure personalized and secure access for different user roles, and supported multiple hospital branches (multi-tenants)

Key Features & Modules:
- Multi-Tenant & Branch-Based Architecture
- Role based Access with Core Roles
- Patient Management (IP & OP Modules)
- Pharmacy Management
- Lab, Radiology, Pathalogy Modules
- Dynamic Configuration Support

Project 2: Work Force Management
Sumanas Technology

Role: Frontend Developer (Angular)
Technologies Used: Angular 7, TypeScript, HTML5, SCSS, Git

Project Description:
Developed a comprehensive Workforce Management System designed to streamline employee operations, monitor attendance, and manage day-to-day task tracking across departments. The portal included both Employee and Management dashboards, enabling seamless collaboration, performance tracking, and team accountability. The system was built with modular components for easy maintenance and scalability.

Key Features & Modules:
1. **Scrum & Task Ticket Tracking**
    - Implemented ticket management for tasks and sprint planning.
    - Integrated views for assigned, in-progress, and completed tasks with real-time updates.
    - Employees could update ticket status and log progress directly through the portal.

Project 3: NYU (New York University) – Seating Management System
Sumanas Technology

Role: Frontend Developer (Vue JS)
Technologies Used: Vue.js, Laravel, MySql, SCSS, Vuex Store, REST APIs, Git

Project Description:
Developed a web-based seating management system for NYU Law School to organize classrooms and examination halls. The application enables administrators to create classes, configure rooms, design seating layouts, assign students to seats, and generate seat labels for examinations and academic activities.

Key Features & Modules:
- **Class Management** - Create and manage classes/courses.
- **Room Management** - Define room capacity and seating arrangements.
- **Seat Layout Designer** - Graphical interface for arranging, resize, align, and position seating elements.
- **Student Management** - Manage student records and assign students to designated seats.
- **Seat Allocation Module** - Map students to available seats.
- **Label Generation Module** - Generate printable seat labels (Reg No, Room & Seat No and Class Name)
- **Admin Dashboard** - Manage classes, rooms, students, and seat assignments.

Project 4: Rainbow Ryders - Hot Air Balloon Booking Platform
Sumanas Technology

Role: Frontend Developer (Vue JS, React JS)
Technologies Used: Vue.js, React js, Laravel, MySQL, WordPress, SCSS, Vuex Store, REST APIs, Git

Project Description:
A hot air balloon ride booking and management platform that allows customers to book rides online, apply coupons, make payments, and manage reservations. The system includes an admin portal for managing balloons, bookings, pricing, users, and business analytics.

Key Features & Modules:
Admin Site (Vue.js, Laravel**):**
- **Balloon Management** - CRUD operations for hot air balloons
- **Booking Management** - Online ride reservation system
- **Coupon & Discount Management** - Percentage and fixed discounts
- **Payment Management** - Secure online payment processing and tracking
- **Pricing Management** - Dynamic pricing configuration
- **User & Admin Management** - Customer registration and profile management
- **Dashboard & Reports** - Booking analytics and statistics

User Site (React js**):**
- **Login** - Login the site by using admin created credentials
- **Full Calendar** - Check the avail dates and choose the date to ride
- **User Details & Payment** - Enter necessary details and pay the amount and receive booking details in mail

---

Project 5: eShopaid – Retail POS (Angular Migration)
Wondersoft Pvt Ltd
Role: Angular Developer

Project Description:
Migrated the frontend of a cloud-based retail Point of Sale (POS) application from Knockout.js to Angular 8. Supported a configuration-driven, multi-client platform with core retail operations.

Key Responsibilities
- Migrated legacy UI components from Knockout.js to Angular 8.
- Developed reusable components for multiple client-specific configurations.
- Worked on core modules including register management, product and stock adjustment, discount configuration, billing, and receipt generation.
- Integrated frontend components with Java backend APIs.
- Fixed bugs and maintained compatibility with existing business workflows.

Project 6: Patient Monitoring Application (MEAN Stack)
ValueMatters Org Consulting Pvt Ltd

Role: Full Stack Developer (**MEAN**)
Technologies Used: Angular 6, TypeScript, Node.js, Express.js, MongoDB, Mongoose, CSS3, NPM, Git, Bitbucket, JWT

Project Description:
Developed a hospital patient monitoring application as a Customer Proof of Concept (POC) using the MEAN stack. The application supported role-based access for administrators, doctors, patients, receptionists, and therapists, with features for patient management, appointment scheduling, doctor assignment, and medical history tracking.

Key Responsibilities
- Developed role-based dashboards for administrators, doctors, patients, receptionists, and therapists.
- Implemented patient registration, onboarding, and profile management.
- Developed appointment booking with availability-based time slot selection.
- Implemented doctor assignment and reassignment workflows based on availability and specialization.
- Built modules for viewing patient medical histories, appointment details, and assigned doctor information.
